The paramyxovirus HN's have antiinflammatory and virucide activity and can be used for identifying a potential inhibitor of paramyxovirus HN. The paramyxovirus HN of the invention useful for treating or preventing undesired properties of infection by paramyxoviruses, and thus for treating or preventing croup, bronchitis, pneumonia, or any other respiratory disease caused by paramyxovirus. This sequence represents the protein of Newcastle Disease Virus (NDV) Haemagglutinin-Neuraminidase of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      such structures to solve the structure of paramyxovirus HN homologues, mutants, co-complexes, and other crystal forms and the use of such structures, their homologues, mutants, co-complexes, and other crystal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 1; Page 30; 30pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Identifying paramyxovirus heamagglutinin neuraminidase (HN) inhibitor useful for treating or preventing croup, by applying three-dimensional structure of active site of paramyxovirus HN to design or select inhibitor -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     neuraminidases (HN),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to structures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           invention.

Its amino acid sequence was deduced from a gene (AAT71747) derived from virus-infected BHK cells. A method of crystallising a VAP such as HN involves: providing a purified virosome derived from a virus contg. the VAP in membrane-bound form; proteolytic cleavage of the VAP to provide a soluble form (see also AAW18229) of the VAP; and crystallising the cleaved VAP using a hanging drop vapour diffusion method. The crystallised VAP can be used to provide a 3-dimensional structure for use in the rational design of
                                                                                                                                                                                                                                                                                                Sequence

                                                                                     An artificial polynucleotide encoding an HN and/or F polypeptide of Newcastle Disease Virus (NDV) DNA, a bioprecursor of the polypeptide, or an epitopic portion of the polypeptide or an artificial nucleotide complementary to the polynucleotide are claimed. The polynucleotides are useful for preparing a probe for extracting similar genes from a gene library or for identifying the prescence of NDV virons in a sample obtd. from poultry. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                         Newcastle disease virus gene clones - comprise polynucleotide(s) encoding the HN and/or F protein of Newcastle disease virus RNA \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    01-JUL-1987

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC foreign DNA sequence inserted into a non-essential site of the SPV CC genome via the use of an homology vector. Homology vector 515-85.1 is C a plasmid useful for the insertion of foreign DNA into the SPV genome. CC The plasmid 515-85.1 contains a unique Acc1 restriction site into CC which foreign DNA may be cloned. The gene for E coli beta-galactosidase CC (NDV-HN) gene are inserted into the SPV 515-85.1 ORF using the vector CC 538-46.26 and the virus S-SPV-001 to produce the virus S-SPV-009, CC junctions A, B, C, D and E represent the sequences between SPV promoter, CC lacz, NDV-HN and SPV fragments. The lacz gene is under the control of CC a synthetic late pox promoter LP1 and the NDV-HN gene is under the control of CC a synthetic late pox promoter LP1 and the NDV-HN gene is under the CC control of a synthetic early/late pox promoter EPILP2. CC influenza A, equine herpes virus I, bovine respiratory syncitial CC virus, bovine pathogen or equine or bovine respiratory syncitial CC virus, diarrhoea virus. The recombinant viruses are also useful for CC enhancing a human immune response. The viral products can also be used CC for antibody production and in disease diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

Recombinant turkey herpes virus (rTH) which comprise a foreign DNA sequence encoding a cytokine inserted into a XhoI site within an EcoRI #9 genomic fragment, where the cytokine can be expressed in host cells infected with the virus can be used in vaccines to protect turkeys against avian viruses. The recombinant viruses can be used for immunising birds against infectious bronchitis virus (IBV), infectious bursal disease virus (IBV), Marek's disease virus (MDV) infectious laryngotracheitis virus (IIV) and Newcastle disease
                                                                                                                                                                                                                                                                                                                                                                                                          Turkey herpes Virus; recombinant virus; vaccine; prophylaxis; immunisation; avian virus; infectious bronchitis virus; infectious bursal disease virus; Newcastle disease virus; Marek's disease virus; infectious laryngotracheitis virus; IBIDU; NDU; MDV; ILV.

without the addition of exogenous proteolytic activity. Also it is
possible to generate a stable transfected cell line that expresses the
wild-type F protein in the virus envelope therefore providing infectious
particles, useful in the form of a vaccine, especially against
crespiratory and/or gastrointestinal diseases. NDV can be easily cultured
to very high titers in embryonated eggs. Mass culture of embryonated
eggs is relatively cheap. NDV vaccines are relatively stable and can be
simply administered by mass application methods e.g. drinking water or
by spraying or by aerosol formation. The natural route of infection is
the respiratory and/or gastrointestinal tract which are also the major
routes of infection of many other poultry pathogens. NDV can induce local
immunity despite the presence of circulating maternal antibody. This
sequence represents a protein encoded by the NDV strain LaSota genome
which is described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

The cell line is useful for the production of infectious lentogenic NDV (Newcastle Disease virus) the production of infectious lentogenic NDV (Newcastle Disease virus)

                                                                                                                                                                                                                                                                                                                                                                                       Newcastle Disease Virus (NDV) HN and F genes were inserted as a Sfil fragment into the homology vector 443-88.8 at the unique Sfil fragment into the homology vector 443-88.8 at the unique Sfil site. The NDV HN and F genes were inserted in the same transcriptional orientation as the ORF in the parental homology vector. The sequence of Sfil fragment is in AAQ6894J/R58858/AAR58859.

The inserted Sfil fragment has the following structure: Junction A - Fragment 1 (HN, AAS 2-577) - Junction B - Fragment 2 (FR.322) - Junction D.

Fragment 1 is approx. 1811 bp AvaII to NacI fragment of the NDV HN CDNA clone (B1 strain). Fragment 2 is an approx 1812 bp BamHI to PstI fragment of the full length NDV FCDNA (B1 Strain). Fragment 3 is an approx 235 bp PstI and ScaI fragment of the plasmid PBR322.

The sequences of the Junctions are in AAQ68945, AAQ68946, AAQ68947 and AAQ68948.

- Junction B - Fragment 2 (NDV F AAS 1-553) - Junction C - Fragment
3 (pBR322) - Junction D - 3'. Fragment 1 is AvaII to NaeI fragment
of the full length NDV HN cDNA clone (B1 strain). Fragment 2 is
BamHI to PstI fragment of the full length NDV F cDNA (B1 strain).
Fragment 3 is a PstI and ScaI fragment of pBR322. The structures
of the Junctions A, B, C and D are given in AAQ70552, AAQ70553,
AAQ70554 and AAQ70555 respectively.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a recombinant fowlpox virus (FPV) comprising a foreign DNA inserted into a region of the fowlpox virus genome corresponding to a 2.8 kb EcoRI fragment, capable of being expressed in a host cell. The virus is used as a vaccine for immunising chickens against Newcastle disease virus (NDV), Fowlpox, and Infectious Laryngotracheitis.

                                                                                                                                                                               The present sequence is provided in a specification relating to a recombinant fowlpox virus (FPV) that comprises a foreign DNA inserted within a 3.5 kb EcoRI fragment of the FPV genomic DNA. The foreign DNA can be expressed in host cells infected with FPV. The recombinant FPV may be used in vaccines to protect animals (especially chickens) against fowlpox and, depending on the source of the foreign DNA, other diseases, particularly Newcastle's disease, Marek's disease or infectious
                                                                                                                                                                                                                                                                                                                                                                                                                                                       New recombinant fowlpox virus useful as vaccines contains inserted into specific non-essential region of the genome

The foreign DNA is capable of being of the fewlpox virus genome. The foreign DNA is capable of being expressed in a host cell into which the fewlpox virus has been introduced and encodes an antigenic protein. The antigenic protein C which may be expressed includes infectious laryngotracheits virus (ILTV) glycoprotein B (gB) or glycoprotein B (gB) ANX58184). Newcastle C (ILTV) glycoprotein B (gB) or ylycoprotein G (gD, ANX58184). Newcastle C disease virus (NDV) haemagglutinin (HN, ANX58182) or fusion (F) protein C (AX58183) and Marek's disease virus gb or gD. The foreign DNA may alternatively encode a cytokine such as chicken myelomonocytic growth factor (cMGP) or chicken interferon (cIFN). The foreign DNA in the croombinant FPV is under the control of one or more synthetic pox promoters, enabling control of strength and timing of heterologous gene expression. The synthetic pox virus promoters that may be used are based on promoters of the vaccinia virus and include early promoter 1 (EPI), late promoter 1 (LPI), EP2 and LP2 (AAZ49291-Z49294, respectively). The recombinant FPV is generated via homologous recombination between FPV DNA and a homology vector containing the foreign DNA flanked by FPV sequences. The recombinant fowlpox viruses of the invention are used as multivalent live vaccines for immunising fowl against Marek's disease virus, NDV, ILTV and/or fowlpox virus. The present sequence represents NDV haemagglutinin-neuraminidase (HN).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Recombinant fowlpox virus useful as a vaccine for immunizing fowl against Marek's disease, Newcastle disease, Infectious Laryngotracheitis Virus and/or fowlpox
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

R46328

hemagglutinin-neuraminidase (BC 3.2.1.-) - Newcastle disease virus (strain LAS/46)

C.Species: Newcastle disease virus

C.Species: Newcastle disease virus

C.Accession: E46328

R;Sakaguchi, T.; Toyoda, T.; Gotoh, B.; Inocencio, N.M.; Kuma, K.; Miyata, T.; Nagai, Y.

Virology 169, 260-272, 1989

A;Title: Newcastle disease virus evolution. I. Multiple lineages defined by sequence vari
A;Reference number: A46328; MUID:89204897; PMID:2705297

NEURAMINIDASE ACTIVITY HELPS THE EFFICIENT SPREAD OF THE VIRUS BY DISSOCIATING THE MATTER VIRIONS FROM THE NEURAMINIC ACID CONTAINING GLYCOPROTEINS.

CATALYTIC ACTIVITY: Hydrolysis of alpha-(2->3)-, alpha-(2->6)-, alpha-(2->8)-glycosidic linkages of terminal sialic residues in oligosaccharides, glycoproteins, glycolipids, colominic acid and synthetic substrates.

SUBJECTIVILAR LOCATION: EXTERNAL, ANCHORED TO THE ENVELOPE BY ITS N-TERMINAL HYDROPHOBIC SEQUENCE.

SIMILARITY: BELONGS TO THE PARAMYXOVIRUSES HEMAGGLUTININ-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                NEURAMINIDASE FAMILY.

I. Multiple lineages defined by sequence variability of the hemagglutinin-neuraminidase gene."; virology 169:260-272(1989).

-!- FUNCTION: HEMAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE VIRUS TO CELL RECEPTORS AND FOR INITIATING INFECTION. NEURAMINIDASE ACTIVITY HELDS THE EFFICIENT SPREAD OF THE VIRUS BY DISSOCIATING THE MATURE VIRIONS FROM THE BUURAMINIC ACID CONTAINING GLYCOPROTEINS.

-!- CATALYTIC ACTIVITY: Hydrolysis of alpha-(2-3)-, alpha-(2-6)-, alpha-(2-8)-glycoproteins, glycolipids, colominic acid and synthetic substrates.

-!- SUBCELLULAR LOCATION: EXTERNAL, ANCHORED TO THE ENVELOPE BY ITS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This SWISS-PROT entry is copyright.
